Yes, I'm a tool junkie. I need a little battery recharging every now and then. But I've made up my mind to leave the tool storage business, and not take any more tools on my next work-for-hire project—unless the client wants one. [Yes, that's how I-Pad Pro turns out to be my "greatest iPad ever." —Ed.] Great review, sorry I missed this the day you posted it. I think that the iPad is a very nice performing device for photo manipulation and video editing; only CR-36r doesn't have a retail release. But I just have to add one more thing: I much prefer to process the captures on a computer and then transfer those Jpegs to and iPad. I had a nice client in my life where she sit some of her best images directly on an iPad and I had to show her what I did to her photos. I just had to say that the iPad pro just does not allow that type of workflow that I am used to working with. Having to transfer an image and then do the adjustments, I just simply prefer to keep my workflow on the computer. People face a dilemma in photography: on the one hand they want to get an absolute, perfect photo. On the other hand, they need to get the shot quickly. As a results, they often just fire off a shot and hope for the best. This is bad, and you can fix that by using metadata. The more information that Lightroom keeps for you, the better it knows how to combine shots and balance the lighting. This starts when you import a photo. Then you can remove unwanted highlights in Adjustment Brush, pull off red-eye in Red Eye Removal, or instantly brighten shadows with Shadow Tones. Even when you're selecting your final image, you can dive into the Adjustment Brush to pull out annoying glitches like posterization, bleeding, or color casts. Lightroom has lots of other features, too. For example, you can join separate photos by dragging a selection box over them. With the point-and-click Simple Profile, all your adjustments are listed in a Settings menu. You can also change Lightroom's settings without opening the library. The default process is to save your meta tags automatically. Even if you're not sure about your settings, this way Lightroom tries to help you out. With the Organizer, you can adjust your files much like you would normally edit them. You can order duplicates to make identical files, create Plural Sizes, create new Lightroom presets, or select a certain back-up location from the main toolbar. Use the Auto-bracketing tool to shoot a series of images at different exposures and then drag the photos over each other in the

library to create a 360-degree image. Select images and videos for Subscriptions. Put your photos in a collection, and you'll see a preview of each image next to it, similar to how Flickr groups work. You can also access them through a dedicated Viewer panel. You can also easily organize your photos using Collections that show the images by the date or location. If you're new to Lightroom and need some help, there's a Help page and tips in the Help menu. Updates are also available, so you won't be stuck with yesterday's tools. Lightroom is a very powerful and useful program that also offers lots of great ways to organize your images.
